Proximity Reader

OS-620

The OS-620 Proximity reader and Keypad uses proven digital radio frequency identification (RFID) technology. It can be mounted directly on metal or to standard U.S.A. single-gang wall boxes and is ideal for applications requiring an access credential and/or personal identification number (PIN) such as high security dual verification.

The OS-620 offers compatibility with Farpointe Data, HID or AWID proximity cards and tags (standard).

Keypad data is transmitted via the reader's data lines in either an 8-bit burst or 26-bit Wiegand data format. The alpha-numeric keypad itself makes use of a durable (no moving parts), non-mechanical capacitive technology.

The OS-620 has advanced enhancements including blue backlighting and a continuously illuminated "5" key for orientation at night. Tactile feedback and a raised 'pip' on the "5" key make this keypad easier to use for the visually impaired.
